Unattended Operation Showing (47 CFR 74.1234)

Local Community Broadcasting, Inc. (FRN 0023094246) proposes to operate this FM translator unattended. It meets 47 CFR 74.1234 as follows.

1. **Automatic shutdown on loss of input.** The translator receives WYML-LP off-air with an Inovonics Aaron 650 rebroadcast receiver fed by a directional receive antenna aimed at WYML-LP. The transmitter, a BW Broadcast TX300 V2, has its silence alarm wired to its own RF mute trigger: when WYML-LP's signal or program audio is lost, the transmitter stops radiating automatically after 60 seconds without program input, and resumes only when WYML-LP's signal returns. High reflected power mutes the transmitter the same way.
2. **Remote control.** The transmitter can be turned off at any time from off site over the internet, through its password-protected network control interface. Remote access goes through a firewall and requires a password.
3. **Protection against tampering.** The equipment is installed in a locked equipment (frame) room in the building at the site, 2904 IL-120, McHenry, Illinois, accessible only to station personnel. Remote controls are password-protected.
4. **Contact.** A person who can turn off the translator on short notice: Joseph Serocki, President, Local Community Broadcasting, Inc., 35144 N Sheridan Drive, Ingleside, IL 60041, 224-715-7766.
